

As part of the SCAF knowledge series we proudly present the Powering Development Podcast. In this podcast, we interview people in the renewable energy sector to share their first-hand experience, how they overcome challenges, and what potential the sector holds.

In the second episode of Powering Development, SCAF's Alexander Kinnel talks about the joys and pains of fundraising in the energy sector with Emmanuel Beau (Founder & President of On.Capital) and Karthik Chandrasekar (Partner at Sangam). Both On.Capital and Sangam currently receive SCAF support under SLO that is used for matching costs of fundraising and pipeline development.

While On.Capital and Sangam are active on two different continents, Africa and Asia, they see similar trends in the cleantech VC sector in both markets.

”

And we know that this bubble is a risk, but you can also take advantage of it if you're a bit smart.

(Emmanuel Beau on electric mobility)

“

”

If you are founder tackling climate change, you should know your GHG reduction numbers!

(Karthik Chandrasekar on clean tech start-ups)

“

A transcript of the podcast will also be published in due course.

What would you be interested in to learn about SCAF's work or the work of our partners? Which subsectors and geographies are most relevant for your work and should therefore be covered? Are there certain areas during the development process that the knowledge series should address?
